

FINSAGE

DEVELOPMENT OF AN AI-BASED FINANCIAL ASSISTANCE PLATFORM FOR FINSAGE USING AGILE METHODOLOGY

V. VIDHULA

Project Title: FINSAGE DEVELOPMENT OF AN AI-BASED FINANCIAL ASSISTANCE PLATFORM FOR FINSAGE USING AGILE METHODOLOGY

Prepared By: V. Vidhula

Date: 18.05.2026

Situation

FinSage is a fintech company that aims to provide digital financial services through modern technologies and AI-based solutions. The company focuses on creating a secure and user-friendly platform for customers to access financial assistance and support services online.

Problem

Customers often face difficulties in accessing financial services quickly, understanding financial products, and receiving instant support. Manual financial processes and limited customer interaction can lead to delays, reduced efficiency, and lower customer satisfaction.

Opportunity

The growing demand for digital financial services creates an opportunity for FinSage to develop an AI-based financial assistance platform. By using Agile methodology and AI technologies, the company can provide faster services, intelligent recommendations, automation, and improved customer experience.

Purpose Statement

The purpose of this project is to develop an AI-based financial assistance platform for FinSage that provides digital financial services, improves customer interaction, and automates financial assistance processes using Agile methodology.

Project Objectives

- To develop an AI-based financial assistance platform for FinSage.
- To provide secure and user-friendly digital financial services.
- To develop an AI chatbot for customer support and communication.
- To simplify loan application and financial assistance processes.
- To provide intelligent financial recommendations for customers.
- To improve customer interaction and satisfaction.
- To automate financial support services and reduce manual effort.
- To implement Agile methodology for continuous development and improvement.
- To ensure secure handling of customer and financial data.

Success Criteria

- ✓ Achieve more than 90% overall system performance and efficiency.
- ✓ Achieve more than 85% customer satisfaction rate through improved financial services.
- ✓ Reduce manual processing effort by 70% through automation and AI integration.
- ✓ Ensure more than 95% data accuracy and secure financial transactions.
- ✓ Complete 100% implementation of planned project modules within the estimated timeline and budget.
- ✓ Achieve faster customer response time through AI chatbot support and automation.
- ✓ Ensure continuous improvement through Agile sprint reviews and stakeholder feedback.
- ✓ Maintain secure and reliable cloud-based financial services throughout the project lifecycle.
- ✓ Successfully deploy the platform with stable system functionality and performance.

Methods / Approach

Agile methodology was used in this project to support iterative development, flexibility, continuous testing, stakeholder collaboration, and regular feedback. The project was developed from scratch through multiple sprints to ensure continuous improvement and faster delivery.

Phrases in Agile

The phrases in Agile model are as follows:

1. Requirement Gathering
2. Product Backlog Creation
3. Sprint Planning
4. System Design & Development
5. Testing
6. Sprint Review
7. Sprint Retrospective
8. Deployment & Feedback
9. Continuous Improvement

- **Requirement Gathering:**

Business requirements were collected from stakeholders to understand customer needs, financial service expectations, and system functionalities. This phase helped identify the project scope and business objectives.

- **Product Backlog Creation:**

All project requirements, features, user stories, and tasks were documented and prioritized in the product backlog. This helped the team organize and manage development activities efficiently.

- **Sprint Planning:**

Sprint planning was conducted to select backlog items for development during each sprint cycle. The team discussed sprint goals, task allocation, timelines, and project priorities.

- **Daily Scrum Meetings:**

Daily scrum meetings were conducted to discuss completed work, ongoing tasks, challenges, and development progress. These meetings improved team communication and coordination.

System Design and Development:

The development team designed and developed the AI-based financial assistance platform modules such as customer registration, loan application, AI chatbot support, and financial recommendation features.

Testing and Bug Fixing:

Functional testing, integration testing, and security testing were performed to identify system defects and improve application performance. Bugs and technical issues were resolved during this phase.

- **Sprint Review:**

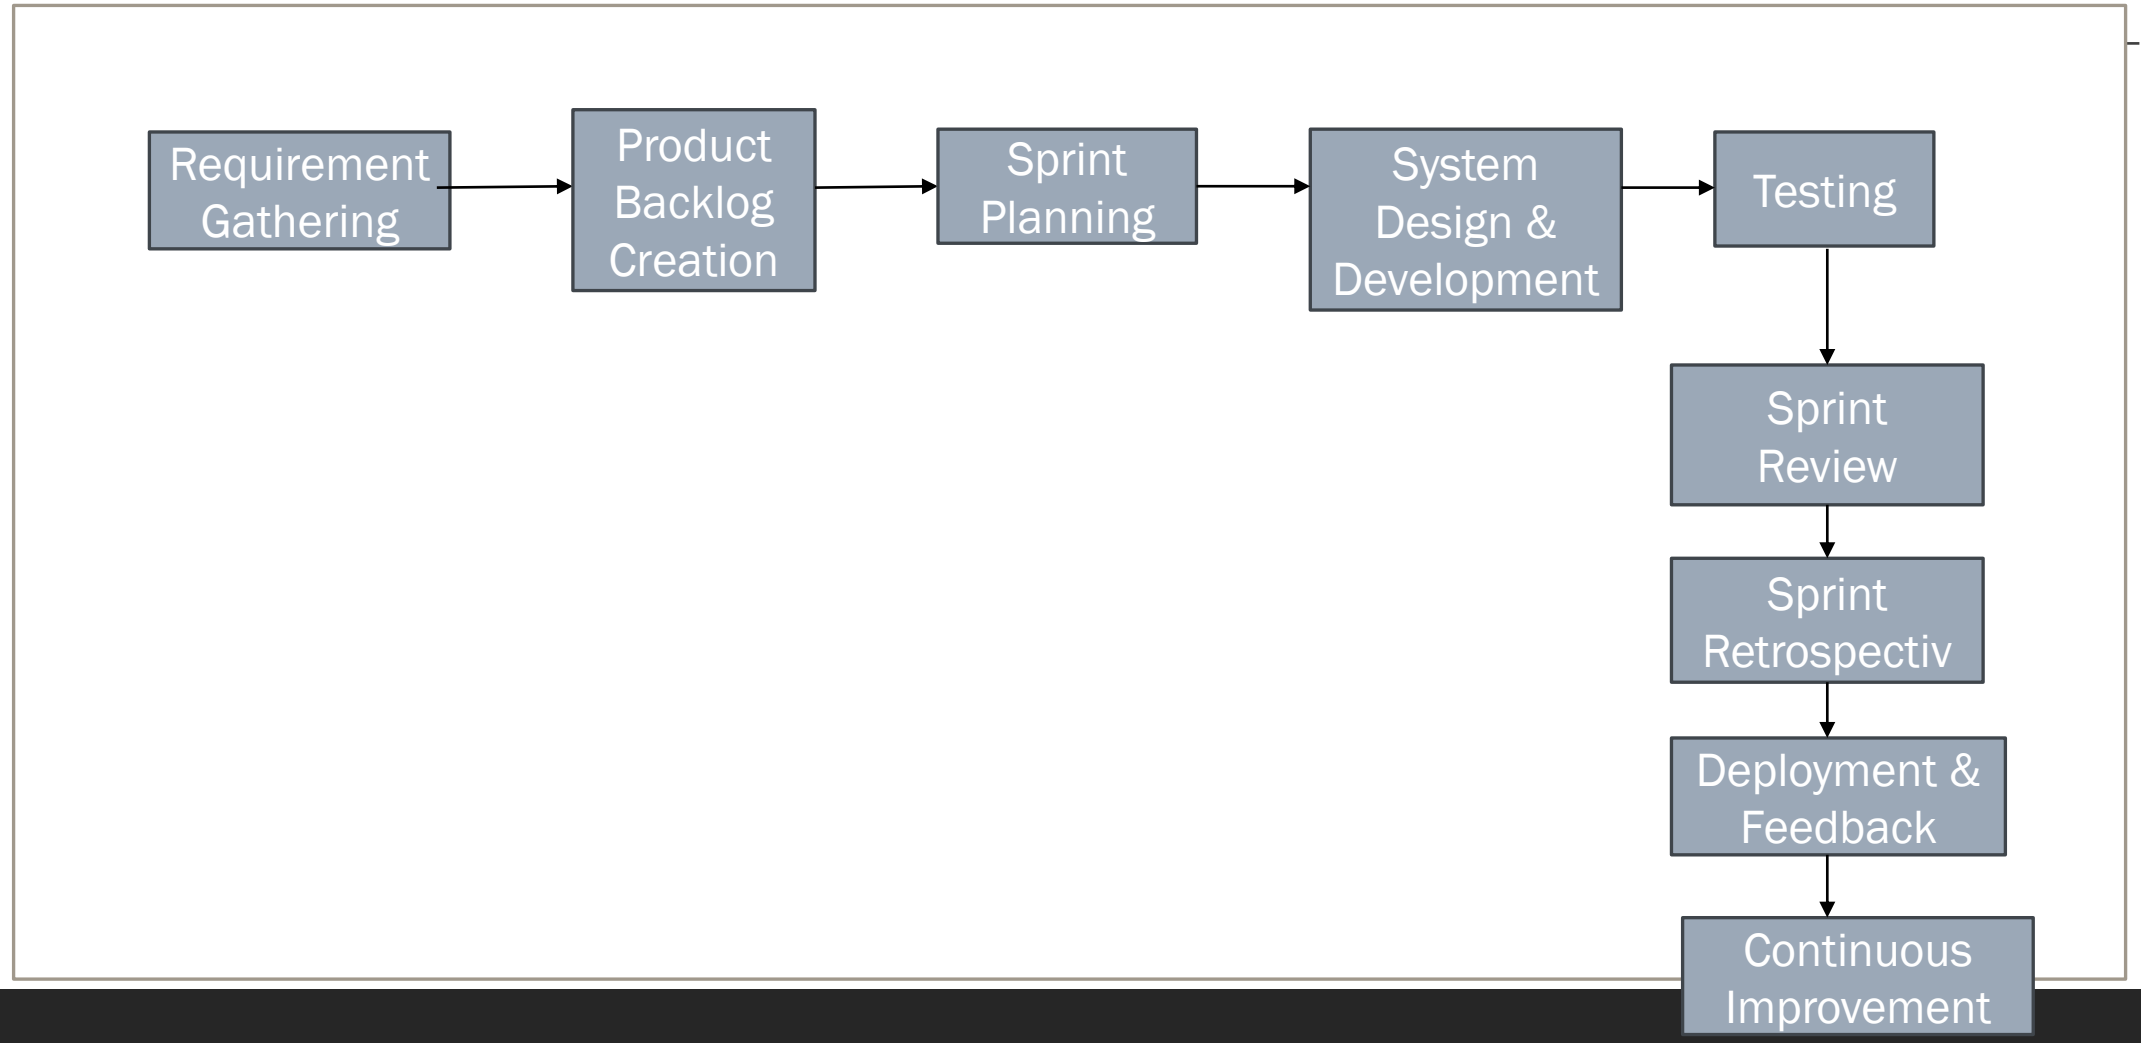

At the end of each sprint, the developed features were reviewed and demonstrated to stakeholders. Feedback was collected to ensure that the system met business requirements and user expectations.

- **Sprint Retrospective:**

The team discussed project performance, development challenges, and improvement areas after every sprint. This helped improve team efficiency and development processes in future sprints.

- **Deployment and Continuous Feedback:**

After successful testing, the application modules were deployed and monitored. Continuous stakeholder feedback was collected to support future enhancements and system improvements.

Requirement Gathering
Product Backlog Creation
Sprint Planning
System Design & Development
Testing
Sprint Review
Sprint Retrospectiv
Deployment & Feedback
Continuous Improvement

Resources

PEOPLE

The project involved the

- Product Owner
- Scrum Master
- Business Analyst
- Development Team
- UI/UX designers
- Testing Team
- Stakeholders

Time

The total estimated project duration is 9 months. The project timeline is divided into multiple phases to ensure proper planning, development, testing, and successful deployment of the AI-based financial assistance platform.

- Requirement Gathering & Analysis: 1 month
- Sprint Planning & Design: 1 month
- Development Phase: 4 months
- Testing & Bug Fixing: 2 months
- Deployment & User Training: 1 month

BUDGET

The estimated project budget was approximately Rs. 20 lakhs, covering software development, AI integration, cloud infrastructure, testing, deployment, and maintenance.

Total Estimated Budget

Rs. 20,00,000 (20 Lakhs)

Other

Additional resources included

- Cloud platforms,
- Databases,
- AI chatbot tools
- Financial APIs
- Testing tools
- Project management software.

Risks

- Financial data security and privacy challenges.
- Continuous changes in business requirements during development.
- Delays in stakeholder approvals and feedback.
- Technical integration and system performance issues.
- Testing delays and unexpected development challenges.

Dependencies

- Stakeholder feedback and approval for project improvements.
- Third-party financial APIs for financial service integration.
- AI chatbot tools and cloud infrastructure services.
- Proper coordination among development and testing teams.
- Continuous testing, deployment, and technical support availability.

To Be Completed by Appropriate Manager
